

# Online Learning Management System

# About APPLICATION

- An online learning system allows managers, trainers and teachers to manage digital e-learning courses through computers or smartphones.
- It is an online-based platform that offers students to get digital solutions for their respective courses that enhance the learning experience.
- An LMS is a software platform for delivering learning material online.

## Problems

- If anyone missed their class, the student could not be covered that topic again.
- Have not focused on individual students
- One to one interaction is not possible
- Maybe skipped some lecture
- Didn't make proper real-time notes
- Data is not in the proper manner
- No proper study structure of courses, subjects, etc.
- Time bounded study
- Anytime learning stopped due to any global issue
- Nowadays offline study is more costly

# Solutions

- Individuals can take a course from the comfort of their office or home
- It takes less time to learn much
- Any time clear doubts using recorded lectures
- Everyone can learn through e-Learning platforms
- Students can study anywhere, with no restrictions on areas
- Easy to choose subjects and topics
- Students can even study in hazardous situations
- Cost-effective learning
- Teachers get additional income from online teaching
- It saves a lot of time for students
