Short Description about LMS

By Team:
Adiyogi Technosoft (P) Ltd

Learning Management System(LMS)

A learning management system is a software application used to plan, implement and access a specific learning process. An LMS provides an instructor with a way to create and deliver content, monitor student participation, and access student performance. It is generally used for the administration, documentation, tracking, reporting automation, and delivery of educational courses and learning & development programs. This concept directly emerged from e-learning.

This system comprises admin, teachers, and users(students). The admin can monitor students, teachers, and subordinates. Admin can make changes in the list of teachers, courses, subjects. He/ she is able to allocate a specific role to the teacher. And, is also responsible for the logo, rules, of the school. Admins are also allowed to manage course plans. Course plans can be free/paid, depending upon the course type.

Similarly, the subordinate admin is teachers. They can monitor the activities of students related to the specific class. The teachers are responsible for providing content in different formats and in different forms to the students. Also, upload lectures and take classes digitally.

Web panel is for admins and teachers. For students android applications are available and in order to access the study material, the web portal is there.

Features & Benefits: -

- Course And Content Management
- User/Student Management
- Subject And Topic Management
- Advertisement
- Assessment Management
- CMS Management
- User Content Management
- Role Management
- Plan Management
